Ingate SIParator with Mitel MiVoice MX-ONE Teleworker Solution

The Mitel MiVoice MX-ONE solution is a SIP based communication system with focus on unified communications and mobility solutions. With the Mitel MiVoice MX-ONE you can reach all office functions such as manage calendar and contacts, presence and telephony as voice, data and video all converge over one network, public or private, fixed or mobile. The Ingate SIParator®, Mitel certified Enterprise Session Border Controller (E-SBC) makes secure SIP communications possible while working seamlessly with your existing firewall no matter where the user is located as long as there is an internet connection. Harness the benefits of Unified Communications with Ingate's cost effective E-SBC, the Ingate SIParator®.

MiVoice MX-ONE is an integrated multimedia communications solution to enable collaboration between people. Ingate SIParator®, E-SBC, together with MiVoice MX-ONE enables a secure and reliable solution for SIP-based communications where the Ingate SIParator® allows the MiVoice MX-ONE to interoperate in environments for different interpretations of the SIP.

SIParator® with MiVoice MX-ONE features

The SIParator® enables remote teleworker clients to be integrated extensions in the MX-ONE. The solution enables telecom users to connect to their private networks and leverage the benefits of UC no matter where the telecom users are: in the hotel, at the airport or even at home without any need for VPN or port forwarding. Ingate SIParator® together with MiVoice MX-ONE also enables other market leading features as:

- Unique security features that allows control of built in XML Browsers on the Mitel SIP Phones (Mitel 6700i series SIP phone)
- Supports Mitel BluStar software client including video and chat through unique adaptations to the MSRP (Mitel 8000i, (BAS) BluStar Application Server)
- Enables integration of remote SIP-DECT base stations

to the PBX (Mitel SIP-DECT 600d Series and 650c)

- Enables integrations of SIP Mobile clients, Mitel Mobile Client, and other SIP softphone clients approved by Mitel to the PBX
- Enhances the security against malicious attacks. Improves availability through unique VoIP survival enabling local calls although no service provider
- Enables adaptations to most interpretations of SIP allowing smooth integration in mixed provider environments
- Prepared for the cloud making this communication solution ideal for those who want to create cloud architectures within their new business models and virtualized environments

The Ingate SIParator®, E-SBC, advantage

The Ingate SIParators® are Enterprise Session Border Controllers (E-SBCs) made for small to large enterprises and service providers. A powerful tool that offers enterprises a controlled and secured migration to VoIP (Voice-over-IP) and other live communications, based on Session Initiation Protocol (SIP). Available only from Ingate® Systems, the SIParator® works seamlessly with your existing firewall to allow the flow of SIP traffic to reach the user in the enterprise, no matter where the user is located, as long as there is an Internet connection. Available in a range of sizes, Ingate's security products offer unprecedented value to enterprises adopting SIP.
