What is SIP Trunking

SIP trunking is the connection between an IP-PBX and a service provider

The Network Border Element

- Firewall/NAT Traversal
- Security of the enterprise network and of the communication
- Ease of deployment
- Interoperability between IP-PBXs and ITSPs
- Platform for "Global Connectivity"

Benefits of SIP Trunking

- Cost savings
 - Lower investment
 - Lower line rental cost
 - Lower minute charges
- Efficient yet secure
 - Easy deployment
 - Seamless growth in capacity (and cost)
 - Efficient use of bandwidth
- First step in next generation networks
 - Remote workers
 - Dual mode handsets
 - IMS
 - Unified communication
